PREFACE

A previous volume, covering the world literature for the period 1928-1933, was published in 1940 by The Geological Society of America as Special Papers Number 27. Some titles omitted there are now entered and indexed. Reviews of articles cited in that volume, which were published during the period 1934-1938, appear here under the original date lines, without repetition of titles.

The field covered is the same as before with a more liberal inclusion of articles relating to sub-Recent Man. This accords with a notable increase of investigation. It seems impracticable to segregate some of the later types of Man from the recognized fossil forms studied by paleontological methods. The same may be said of certain late Quaternary birds and mammals.

The Serial List, except for a few corrected titles and call numbers, supplements the list previously published. Many of the abbreviations in the Author Catalogue will, therefore, be found in that previous list.

The Systematic Index includes names of subgenera indexed both alphabetically and in parentheses following their genera. Synonyms are enclosed in parentheses and preceded by an (=) sign. Bracketed entries in the Systematic Index indicate names which we consider to be taxonomically preferable. Authors of new names appear in italics.

The Synopsis of Classification has been revised in accordance with recent research, especially the works of Boonstra on the dinocephalians, Romer and Price on the pelycosaurs, Wood and Wood on the rodents, and Simpson on the primates and insectivores. Wetmore's recent revision of the classification of birds has been adopted.

Important discoveries made during the period include: the continental Lower Triassic of Sinkiang with a fauna closely related to the *Lystrosaurus* zone of the South African Karroo, found by the last Sven Hedin expedition and reported by Yuan and C. C. Young; the continental lower Triassic of Madagascar with the earliest known anuran, described by Piveteau; Broom's discovery of Pleistocene man in caves of the Transvaal; new localities in the Paleocene of North America; Koenigswald's finds of *Pithecanthropus* in Java, additional remains of Neanderthal man, particularly Saccopastore, Steinheim, and Swanscombe; and further discoveries confirming the association of early man with extinct mammalian faunas in North and South America—particularly Chile (Junius Bird), Ecuador (Uhle and Spillman), Brazil (Walter Cathoud and Mattos), New Mexico (Bertrand Schultz and E. Howard), Folsom, (E. Bryan and Roberts), Lake Mohave (Elizabeth Campbell), and Minnesota (Jenks and Antevs).

A review of recent work should mention again most of the authors cited

in 1940. In addition, the following have contributed notably during the present period:

Brotzen, Robertson, Weiler, and Westoll on ostracoderms and early fishes; Säve-Söderbergh on Devonian fishes and Amphibia; Lehman on acanthodians; Aldinger and Moy-Thomas on chondrosteans; Hills, Paucă, Piton, M. Sanders, Voigt, Wade, and E. I. White on Tertiary fishes; Chabanaud and Norman on flat fishes; Frost on otoliths; Steen and Augusta on stegocephalians; W. Herre on urodeles; Kuhn on reptiles; E. Olson, Partridge, Trusheim, Van Hoepen, and C. Young on Triassic reptiles; Bergounioux, Hummel, and Szalai on turtles; Bystrow, Efremov, Hartmann-Weinberg, and Riabinin on Russian pre-Tertiary tetrapods; Mook, Kálin, and Roxo on crocodilians; Barnum Brown, Russell, and C. M. Sternberg on dinosaurs; Adloff, Anthony, Friant, and Patte on mammalian dentition; Chardin, Colbert, Shikama, Tokunaga, Trassaert, and C. Young on East Asiatic mammals; Bakalow, Borissiak, Gromov, Gromova, Orlov, and Želízko on Russian mammals; Astre, Bate, Blanc, Dietrich, Frechkop, Helbing, Heller, Hilzheimer, Joleaud, Kormos, Leriche, Morosan, Mottl, Pia, T. Raven, Royo y Gómez, Sähleanu, Schreuder, Sickenberg, Sieber, Stehlík, Stromer, Tobien, and Weigelt on West European mammals; Gazin, C. Hesse, Hibbard, Jepsen, C. Johnston, Patterson, O. Peterson, Schlaikjer, Stirton, W. Scott, and Stovall on New World mammals; Hopwood and Reck on African mammals; Cabrera and Riggs on South American mammals; Paula Couto on bats; Schaub, Pidoplichka, Roman, Vinogradov, and R. Wilson on rodents; Slijper and Van Diense on whales; Denison on creodonts; Helbing and E. Hall on mustelids; Hahn on procaviids; Vander-Hoof and Nagao on *Desmostylus*; H. E. Wood on rhinos; Thorpe on oreodonts; Hürzeler on cainotheres; Bohlin, Frick, Pilgrim, and S. Reynolds on ruminants; Friant and Lamberton on lemuroids; Garrod, Kadić, Keith, Leakey, Lewis, Marston, Matiegka, MacCown, MacCurdy, Quenstedt and Quenstedt, Pei, Reck, Sandford, Sellards, Sera, Sergi, Terra, Vallois, Vaufrey, Weidenreich, and Weinert on primates and early Man; and Compton, H. Howard, Lowe, A. H. Miller, Shaw, Tugarinov, and Wiman on birds.

Special fields are represented by Sarton on the history of science; Davies, Mirčink, and many others on stratigraphy; Beer, Haines, A. Howell, Morton, and Stadtmüller on comparative anatomy; and Bencini, Kubacska, and Rokhline on paleopathology. There has been a great increase in the Soviet literature.

Among those who have died during the period are: Carlos Ameghino, F. A. Bather, Davidson Black, G. A. Boulenger, J. W. Deecke, Dragutin Gorjanović-Kramberger, Léon Henri-Martin, Léonce Joleaud, A. P. Karpinsky, F. L. Kitchin, Hans Klähn, Kálmán Lambrecht, F. B. Loomis, H. F. Osborn, W. A. Parks, O. A. Peterson, Hans Reck, Guiseppe Sergi, W. J. Sinclair, G. Elliot Smith, J. P. Smith, William Sollas, Frederick Tilney, Johannes Walther, Max. Weber, and Ewald Wüst.

ACKNOWLEDGMENTS

Assistance in the preparation of the abstracts, the translations, and the manuscript has been furnished by the personnel of Works Project Administration, Official Project no. 265-1-08-80, Unit A-1. Funds have also been supplied by the Penrose Bequest of The Geological Society of America.

Work was begun in 1939 under the supervision of Mr. Taylor. Preliminary copy of the Author Catalogue and most of the abstracts and translations were made under his direction. The first draft of the Subject Index was prepared by Mr. Frank Peabody.

Among others who have helped, we should most gratefully mention Mrs. Jennie Woolley, Mrs. Pauline Holloman, Mr. Frank N. Trueny, Mr. Joseph Goldsmith the translator, and the staff of the University of California Library.

Titles inadvertently omitted will be included in the next edition if authors will kindly send their articles to us for indexing.

SYNOPSIS OF CLASSIFICATION

Consult the systematic index for citations to literature, also for names of sub-families, genera, subgenera, species and lower categories.

Kingdom ANIMALIA

Incertae sedis: CONODONTI (exclusive of CONODONTOPHORIDA)

Phylum CHORDATA

Incertae sedis: *Scaumenella*, *Ainiktozoon*

Subphylum ACRANIATA

Subphylum CRANIATA (= Vertebrata)

Ichnites (tracks, trails and burrows)

Division AGNATHA

Superclass MARSIPOBRANCHII

Class OSTRACODERMI (= Ostracophori)

Incertae sedis: *Donyaspis*, *Giganthaspis*.

Order CEPHALASPIDOMORPHA (= Monorhina)

Suborder OSTEOSTRACI

CEPHALASPIDAE, OSELASPIDAE, TREMATASPIDAE

Order PTERASPIDOMORPHA (= Diplorhina)

Suborder HETEROSTRACI (= Aspidophorida)

ASTRASPIDAE, DREPANASPIDAE, PTERASPIDAE

Suborder THELODONTI (incertae sedis; = Coelolepida).

THELODONTIDAE (= COELOLEPIDAE)

Order ANASPIDA

BIRKENIIDAE, EUPHANEROPIDAE, LASANIIDAE, PTEROLEPIDAE

Class CYCLOSTOMI

Order PETROMYZONTIA (= Hyperoartia = Myzonida)

PETROMYZONIDAE

Order MIXINOIDIA (= Hyperotreta)

MIXINIDAE

Division GNATHOSTOMATA

Oöolithes (eggs, egg shells and egg capsules).

Superclass PISCES

Ichthyodorulites (spines of fishes).

Class APHETOHYOIDEA

Order PLACODERMI

Incertae sedis: *Taunaspis*.

Suborder ANTIARCHI

Incertae sedis: *Eucentrurus*.

ASTEROLEPIDAE

Suborder ARTHRODIRA

Incertain sedis: *Leurodus*.

Infraorder ACANTHASPIDA

PHLYCTAENASPIDAE

Infraorder BRACHTHYORACI

Incertain sedis: *Leptaspis*.

COCCOSTEIDAE, HOLONEMIDAE, HOMOSTIDAE, MYLOSTOMIDAE,

PTYCTODONTIDAE

Suborder ANARTHRODIRA (= Petalichthyida, also regarded as a subclass of Chondrichthyes)

MACROPETALICHTHYIDAE

Order ACANTHODEI

Incertain sedis: PROTODONTIDAE; (see systematic index).

ACANTHOËSSIDAE, DIPLACANTHIDAE, GYRACANTHIDAE, ISCHNACANTHIDAE

Order RHENANIDI

Incertain sedis: CONODONTOPHORIDA, CRATOSSELACHIDAE, "GNATHODONTIDAE."

ASTEROSTEIDAE, JAGORINIDAE

Class CHONDRICHTHYES

Subclass ELASMOBRANCHII

Incertain sedis: *Coronodus*, *Palaeoxyris*, *Petrodus*, *Scapellites*.

Order CLADOSELACHII

CLADOSELACHIDAE, CTENACANTHIDAE

Order PLEURACANTHODII (= Ichthyotomi)

PLEURACANTHIDAE

Order SELACHII

Suborder SQUALIFORMES
